

# 2011 Hunting Access Guide

Valid only for the 2011 hunting season

## Hunters Welcome

### Region 6

NOTICE: Due to extensive flooding in 2011, many roads, including county roads and main travel routes, were damaged. Some roads may still be closed during hunting season. When planning a hunt, if unsure, we suggest contacting the appropriate land management agency or county office to determine road status in the area you plan to hunt. Contact information for counties can be found in the Montana Directory of Maps at <http://fwp.mt.gov/hunting/hunterAccess/toolkit.html> and land management agency contact information can be found elsewhere in this Hunting Access Guide.

# ABOUT THE PROGRAM....

**BLOCK MANAGEMENT** provides managed public hunting free of charge on private and isolated public land enrolled through cooperative agreements between Fish, Wildlife, & Parks (FWP), private landowners, and public land management agencies.

- **Landowners do not forfeit any private property rights** by enrolling land, including the right to deny access for cause and the right to enforce ranch rules;
- Every Block Management Area (BMA) has **rules specific to that BMA**. It is the hunter's responsibility to know the rules for a BMA being hunted;
- **Hunters with special needs** are encouraged to contact the regional FWP office to determine if opportunities exist to meet specific needs;
- Hunters should **sign permission slips only for the actual days of hunting**. Signing for additional days costs program dollars that could be used to enroll other BMA properties;
- Hunters should **cancel reservations** if unable to hunt on the reserved day. Failure to cancel reservations may result in cancellation of future BMA privileges;
- **Hunter behavior** determines whether or not landowners participate in the program. Courteous, legal, and ethical behavior keeps gates open. Please report any violations.
- There are **two types of BMAs:**
  - **Type 1 BMA: area where hunters administer their own permission.** This includes BMAs that use sign-in boxes, and BMAs that do not require hunters to obtain permission. Typically, Type 1 BMAs do not limit hunter numbers or require reservations, although some parking areas have vehicle limits.
  - **Type II BMA: area where someone other than the hunter issues permission.** This includes BMAs where the landowner or an FWP staff member issues permission. Type II BMAs often require reservations and utilize pasture assignments, hunter number limits, and other hunter management systems.
- **BMA Maps:**
  - Each region has its own policy regarding distribution of maps. Some regions provide a specific number of maps per hunter per day, while other regions may only provide maps at the BMA site when the hunter receives permission. Please refer to the regional information in this guide to determine how a particular region handles map distribution.
  - For the 2011 hunting season, FWP will provide some BMA maps electronically on the FWP website at <http://fwp.mt.gov/hunting/hunterAccess/privateLand/blockman/>

## Montana Fish, Wildlife and Parks - Region 6

## ***REGION 6 BLOCK MANAGEMENT PROGRAM, 2011***

Region 6 has over 300 ranches enrolling over 1,300,000 acres in Block Management. These areas offer excellent opportunity to hunt whitetail and mule deer, elk, antelope, upland game birds, and waterfowl. Most of our Block Management Areas (BMAs) are open from September 1 to December 31, but some open early for the early antelope season. Some landowners, including those not enrolled in Block Management, may be able to accommodate hunters with special needs. Hunters are encouraged to contact our regional FWP Office to determine if opportunities exist to meet specific needs.

Two kinds of BMAs are available in Region 6, classified as Type I and Type II BMAs. In this region, Type I BMAs are areas in which hunters administer their own permission by using daily sign in boxes. Type II BMAs are areas in which written permission is given to the hunters by landowners.

Hunters can obtain specific BMA maps and rules on site at sign-in box locations, on line at fwp.mt.gov (available in August) or at landowner residences. Region 6 maps showing all BMAs are on display at the Glasgow and Havre offices and will also be available online at fwp.mt.gov. The Region 6 Hunting Access Guide detailing all Region 6 BMAs is available through the regional offices or online at the beginning of August. Hunters can also use this guide to compare BMAs on the included regional map, with the correlating BMA description charts to compare size, geographical location, and hunting opportunities desired.

The Region 6 Block Management Staff encourages you to share your experience on specific BMAs by sending comment cards, pictures, or letters to the Glasgow office, or by dropping off comment or survey cards in sign-in boxes. We share these with landowners to show your appreciation, or to help improve the program.

### **Chouteau County**

The majority of Chouteau County is comprised of private land. Significant blocks of BLM lands are located along the Missouri River. There are 2 ranches with over 16,000 acres of land enrolled in the program within the county.

There are high population densities of mule deer along the Missouri and Marias Rivers, and south of the Bear Paw Mountains. There is a healthy population of white-tailed deer along the Missouri and Marias River bottoms and associated CRP acreage. Antelope occur in moderate to high densities near Big Sandy, especially west in the agricultural areas.

There are good numbers of sharp-tailed grouse in the foothills of the Bear Paw Mountains and good numbers of partridge throughout the county. Pheasants are found mostly along CRP and streams. A low population of sage grouse can be found along the Missouri Breaks.

There are excellent duck and goose hunting opportunities along the Missouri River.

### **Hill County**

The majority of Hill County is comprised of private land. There are 3 ranches with over 17,000 acres enrolled in the program within the county.

Due to harsh winter conditions, mule deer numbers have decreased to average population densities around the Bear Paw Mountains and low populations along the Milk River. White-tailed deer can be found throughout the Bear Paws and along the Milk River. Antelope are scattered in moderate densities due to limited habitat.

Sharp-tailed grouse can be found in brushy coulees in the Bear Paw Mountains and on the prairies. Sage grouse numbers are limited due to small amounts of habitat available. Partridge can be found throughout the county in good populations, but numbers may be down due to wet spring conditions. Pheasants are found in moderate populations along the Milk River area.

Ducks and geese are found throughout the county.

### **Blaine County**

About 50% of Blaine County is made up of private land. Significant blocks of BLM are located in the north and southeast portions of the county. Over 50 ranches with over 350,000 acres are enrolled in the Block Management program in this county.

Mule deer surveys indicate numbers are below average in North Blaine County due to the harsh winter. White-tailed deer are found along the Milk River area and throughout the Bear Paw Mountains. Antelope numbers are below average in North Blaine County, but are fair in South Blaine.

Sharp-tailed grouse occur mainly in brushy coulees in the Bear Paws and are at good population levels this year; however numbers may be spotty throughout the county due to a wet, cool spring and harsher winter. Sage grouse populations are low throughout Blaine County due to the lack of sagebrush habitat. Partridge can be found throughout the county in good populations, but numbers may be down due to wet spring conditions. Pheasants can be found in moderate to high populations along the Milk River area. However, pheasant numbers are currently below average along the Milk River in Blaine County.

Ducks and geese are found throughout the county, primarily in manmade reservoirs, and wetland conditions are excellent this year which should result in good waterfowl hunting opportunities this fall.

### **Phillips County**

Although the majority of Phillips County is private land, large amounts of BLM land also occur throughout the county. The Charles M. Russell (CMR) National Wildlife Refuge is located along the south edge of Phillips County and borders Fort Peck Reservoir. Bowdoin NWR, as well as several small Waterfowl Production Areas and Wildlife Management Areas, are also found here. There are more than 30 ranches with over 170,000 acres enrolled in Block Management in this county.

There is good mule deer, white-tailed deer and antelope habitat across the county; however, recent hard winters have caused decreases in populations. Mule deer are generally found in the prairie, badlands and breaks habitats, while white-tailed deer are located along the Milk River bottom and in areas associated with agriculture in North and South Phillips County. CRP fields can also be excellent places to hunt for white-tailed deer. Almost all whitetail hunting is on private land, but many landowners will grant permission to hunt when asked.

Elk numbers are currently at high levels in HD 622. The vast majority of elk are found in the Missouri River Breaks and Larb Hills and all elk hunting is by special permit only in these areas. Hunters having an elk permit should be prepared to hike at least a mile away from roads and have some means to retrieve their elk (game cart, pack, horses, etc...) since most elk are quickly pushed into secure habitat away from roads and trails.

Upland bird numbers are expected to be fair this fall due to a severe winter and a cooler & wetter spring; however, greater than average spring precipitation has resulted in excellent summer habitat conditions. Upland game bird numbers can also vary throughout the county due to localized weather conditions, such as severe thunderstorms and hail. Pheasant hunting opportunities are getting more difficult due to limited access on private land and heavy hunting pressure on public lands, including Bowdoin National Wildlife Refuge. Wetland conditions and waterfowl populations are excellent across Phillips County due to abundant spring moisture and good runoff so good waterfowl hunting opportunities should be present this fall.

### **Valley County**

The majority of Valley County is private land. Large amounts of BLM are located throughout the county. The Charles M. Russell National Wildlife Refuge is located in the southern portion. Two Wildlife Management Areas (WMAs) are located near Hinsdale. There are over 40 ranches with nearly 180,000 acres enrolled in the program in the county.

Mule deer populations occur across the county. Mule deer numbers declined significantly due to the record breaking winter, and are currently below long term averages. Surveys indicate winter mortality across all age classes. Although habitat conditions are excellent this summer, expect fewer mature bucks this year, and fewer fawns and yearlings as well.

White-tailed deer can be found throughout Valley County and especially along the Milk River Valley. White-tailed deer also took a hit during the historical winter, and are down significantly along the Milk River, but numbers are still moderate to good and some game damage situations may persist in areas within the valley.

Antelope populations suffered historical declines as a result of the severe winter. Although they can be found throughout the county, numbers this year are down significantly. .

The majority of elk are found in the Missouri River Breaks and all elk hunting is by special permit only in these areas. Elk numbers are within population objectives in HDs 631 and 632.

Sharp-tail grouse numbers are fair year, and are found mainly in the northern part of the county and in the Missouri Breaks. Sage grouse numbers are good this year, and are best

found in the southern part of the county. Partridge populations are spotty. Pheasant populations are below long-term averages. They are typically found within the Milk River Valley, but besides the severe winter, the entire river valley suffered moderate to major flooding from April through June. Pheasants can also be found in CRP and other associated habitat outside the river valley.

Waterfowl can be found throughout the county in stock ponds and along the Milk and Missouri River. Due to very high amounts of snow melt and spring rainfall, natural ponds and depressions are full of water so waterfowl will likely be spread out more throughout the county and good waterfowl hunting opportunities should be present this fall.

### **McCone County**

The east half of McCone County is mainly privately owned. BLM acreage increases in the west. The Charles M. Russell National Wildlife Refuge is located on the extreme west border. There are more than 20 ranches with nearly 140,000 acres enrolled in the program in the Region Six Portion of the county. There are also some BMAs located in the county that are administered by Region Seven.

Mule deer are found throughout the county especially in rougher country and populations are at long-term averages. Some game damage has been occurring in and around the town of Circle. Otherwise, mule deer populations have declined somewhat since 2010.

There are good populations of white-tailed deer along the Missouri River area and CRP and in some cases, are causing considerable game damage on private lands.

The antelope populations also declined due to the winter. They are best found in the southern half of the county.

Sharp-tailed grouse numbers are fair and can be found in rough/brushy country. Sage grouse populations are good and can be found in sagebrush habitat. Partridge are found in spotty populations. The best areas to find pheasants are along the Missouri River areas and CRP.

Waterfowl can be found throughout the county at stock ponds and along the Missouri River and wetland conditions and waterfowl numbers are very good this year.

### **Richland County**

The majority of Richland County is privately owned. Hunting access is fair, except along the Missouri River where access is more restricted. There are 16 ranches with over 70,000 acres enrolled in the program in the Region Six part of the county. There are additional BMAs located in the south and east portions of the county administered by Region Seven.

White-tailed deer and mule deer are found in good numbers throughout the county. Antelope are expected to be below average following harsh winter conditions in 2010.

Sharp-tailed grouse and pheasant numbers are good in the majority of the county, while partridge are found in spotty populations. Habitat conditions have been good and the county is producing good numbers of upland game birds. The turkey population is fair and is strongest along the Missouri and Yellowstone River bottoms.

Waterfowl can be found throughout the county in stock ponds and along the Yellowstone and Missouri Rivers. Wetland conditions have been good in 2011 and good waterfowl hunting opportunities should be present this fall.

### **Roosevelt County**

The majority of Roosevelt County is comprised of private land. Hunting access on private land is good except for along the Missouri River. This county has over 50 ranches with nearly 95,000 acres enrolled in the program.

White-tailed deer are distributed throughout the county and populations are at average levels. There are good numbers of mule deer found in rough topography adjacent to the Missouri River. The county contains limited antelope habitat that supports a few antelope.

Following tough winter conditions in 2010, sharp-tailed grouse and pheasant populations are currently at or slightly below average levels. Habitat conditions are good and numbers of young are expected to be decent this year. Partridge populations are spotty. Turkey populations are limited to the Missouri River bottom.

Waterfowl hunting opportunities are good, with abundant precipitation seen so far in 2011.

### **Daniels County**

Daniels County is comprised of about 50% private land and 50% state owned land. There are over 15 ranches with over 40,000 acres enrolled in the program.

White-tailed deer populations are at average levels. Mule deer populations are currently above average. Antelope populations are fair in suitable habitat, but will be limited following harsh winter conditions in 2010.

Sharp-tailed grouse populations have rebounded to average levels. Pheasant and partridge populations are fair. Favorable habitat conditions exist across the county and production of young birds is expected to be good.

Waterfowl hunting opportunities are expected to be good, with abundant precipitation seen in 2011.

### **Sheridan County**

The majority of Sheridan County is comprised of private land. Parts of the Medicine Lake National Wildlife Refuge and numerous Waterfowl Production Areas are open to public hunting. Contact the refuge headquarters for further information (406-783-2305). In the county, there are nearly 50 ranches with more than 90,000 acres of land enrolled in Block Management.

White-tailed deer populations are at average levels and mule deer populations are above average. Antelope populations will be limited following harsh winter conditions in 2010.

Sharp-tailed grouse and pheasant populations have rebounded to average levels. Partridge populations are fair. Habitat conditions in 2011 are good for upland game birds and production of young is expected to be decent. Waterfowl hunting opportunities are expected to be good due to the abundant precipitation seen in 2011.
